

For rough work

Program Design:

```

→ userapprun (Void) {
    music.notearray [] = { } ;
    timerarray [] = { } ;
    static counter=0;
    static index=0;
    if (counter == timearray [index]) {
        call InterruptTimerXus.
        if (index > 27) {
            index=0 ;
        } else {
            index++;
        }
        counter++;
    }
}

```

→ interrupts.c

line 125 → DACIDATL = G_audiUserAppsinTable [index]
Index > +4
